Target role: Senior Platform Engineer

Company: Northstar Labs

Location: Remote - United States

Remote policy: remote

Summary

Senior software engineer focused on platform engineering, CI/CD, release governance, and observability with experience building enterprise developer tooling and large-scale migration programs.

Selected experience

Senior Software Engineer

Architected a standardized CI/CD pipeline framework in partnership with the Paved Road team, establishing consistent, reusable GitHub-based workflows for thousands of engineers and applications across the organization.

Skills: CI/CD, GitHub, Platform Engineering, Automation

Senior Software Engineer

Developed a standardized CD architecture supporting deployments across up to four environments with policy validation, artifact deployment, post-deployment testing, release creation, and change request procedures.

Metrics: 4 environments

Skills: Continuous Delivery, Deployment Automation, Release Engineering

Software Engineer II

Developed a release governance platform enforcing internal deployment policies across Azure DevOps and GitHub, validating over 15,000 deployment pipelines through Azure DevOps Pipeline Decorators and GitHub Deployment Protection Rules.

Metrics: 15,000 deployment pipelines

Skills: Azure DevOps, GitHub, Deployment Policy, Platform Engineering

Software Engineer II

Automated onboarding and validation workflows, eliminating manual platform reviews and configuration, reducing onboarding effort from 30 minutes to 0 and increasing adoption from 10% to 100% of eligible pipelines.

Metrics: 30 minutes to 0; 10% to 100% adoption

Skills: Automation, Developer Experience, Workflow Design

Core skills

Java, Python, JavaScript, TypeScript, SQL, HTML/CSS, Azure DevOps, GitHub Actions, Git, CI/CD, Grafana, Prometheus, Grafana Loki, PromQL, LogQL, Splunk, Node.js, Express.js
