Application for Senior Platform Engineer

Dear Hiring Team,

I am excited to apply for the Senior Platform Engineer role at Northstar Labs. My background in software engineering, platform automation, and developer enablement aligns closely with the needs of the team at Northstar Labs.

In my work at GEICO Tech, I have focused on building and standardizing engineering systems that improve developer productivity and delivery reliability. Architected a standardized CI/CD foundation that gave the organization reusable GitHub-based workflows for thousands of engineers and applications. Developed and supported GEICO's enterprise observability platform using Grafana Loki and Prometheus to enable a broad migration away from Splunk.

This experience has shaped how I approach platform work: I value clear guardrails, scalable automation, and practical collaboration with product and engineering teams. I would welcome the opportunity to bring that perspective to Northstar Labs and help drive a high-quality developer experience while supporting reliable delivery at scale.

Thank you for your time and consideration. I would appreciate the opportunity to discuss how my experience can support Northstar Labs and the Senior Platform Engineer team.

Sincerely,
Eric Grunblatt
